University of Glasgow | School of Computing Science

Assessed Coursework

Course Name	**Advanced Operating Systems (M)**			
Coursework Number	**Exercise 1**			
Deadline	**Time:**	**4:30pm**	**Date:**	**28 January 2016**
% Contribution to final course mark	**4%**		**This should take this many hours:**	**2**
Solo or Group ✓	**Solo**	✓	**Group**	
Submission Instructions	**Submit via the dropbox outside the Teaching Office in Lilybank Gardens**			
Who Will Mark This? ✓	**Lecturer** ✓		**Tutor**	**Other**
Feedback Type? ✓	**Written**		**Oral** ✓	**Both**
Individual or Generic? ✓	**Generic** ✓		**Individual**	**Both**
Other Feedback Notes				
Discussion in Class? ✓	**Yes** ✓		**No**	
Please Note: This Coursework cannot be Re-Done				

Code of Assessment Rules for Coursework Submission

Deadlines for the submission of coursework which is to be formally assessed will be published in course documentation, and work which is submitted later than the deadline will be subject to penalty as set out below. The primary grade and secondary band awarded for coursework which is submitted after the published deadline will be calculated as follows:

(i) in respect of work submitted not more than five working days after the deadline
   a. the work will be assessed in the usual way;
   b. the primary grade and secondary band so determined will then be reduced by two secondary bands for each working day (or part of a working day) the work was submitted late.

(ii) work submitted more than five working days after the deadline will be awarded Grade H.

Penalties for late submission of coursework will not be imposed if good cause is established for the late submission. You should submit documents supporting good cause via MyCampus.

Penalty for non-adherence to Submission Instructions is 2 bands

You must complete an "Own Work" form via

http://www.dcs.gla.ac.uk/socs-online for all coursework

UNLESS submitted via Moodle

Advanced Operating Systems (M): Exercise 1

Dr Colin Perkins

21 January 2016

The lectures in the first week of the course introduced priority-driven scheduling for real-time tasks. This problem set will test understanding of that material, and give practice in determining if it is possible to schedule real-time systems. You should answer all questions.

Question 1: Consider the following two systems of independent periodic tasks, scheduled in a pre-emptive manner on a single processor. Is it possible to schedule these systems using either the rate monotonic algorithm or the earliest deadline first algorithm (assume the phase for each task is equal to zero, and relative deadline equals the period)? Explain your answers. [10 marks]

- $T_1 = (7, 1)$, $T_2 = (8, 2)$, and $T_3 = (24, 3)$
- $T_1 = (5, 2)$, $T_2 = (4, 1)$, $T_3 = (10, 1)$, and $T_4 = (20, 3)$.

Question 2: A system comprises three independent periodic tasks, scheduled pre-emptively on a single processor: $T_1 = (3, 1)$, $T_2 = (30, 11)$, and $T_3 = (15, 3)$. We need to reduce the execution time of T_2, to guarantee that the rate monotonic algorithm can schedule the system. Assuming that the execution time must take an integer value, what is the maximum execution time for T_2 that allows us to make that guarantee? [4 marks]

Question 3: How does the maximum utilisation test for earliest deadline first scheduling change if the relative deadline of a task differs from that task's period? [4 marks]

Question 4: We considered several priority-driven scheduling algorithms for real-time systems. These algorithms make *locally optimal* decisions about which job to run, based on the priorities of the runnable tasks when the scheduler runs, but the resulting schedule is often not globally optimal. Explain why not. [4 marks]

Question 5: The periodic tasks $T_1 = (3, 1)$, $T_2 = (4, 2)$, and $T_3 = (6, 1)$ are scheduled in a pre-emptive manner according to the rate monotonic algorithm on a single processor. Draw a graph of the time-demand function for each of the three tasks [2 marks for each task]. Can these tasks be scheduled? Justify your answer. [2 marks]

Answers must be submitted by 4:30pm on 28 January 2016. As per the Code of Assessment policy regarding late submissions, submissions will be accepted for up to 5 working days beyond this due date. Any late submissions will be marked as if submitted on time, yielding a band value between 0 and 22; for each working day the submission is late, the band value will be reduced by 2. Submissions received more than 5 working days after the due date will receive an H (band value of 0).

A drop box will be available for submissions in outside the Teaching Office in Lilybank Gardens, and submissions will only be accepted via that drop box. This problem set is worth 4% of the mark for this course. Ensure that your name and matriculation number are included on each submission, and that you have submitted a statement of originality. Submissions that do not follow these submission instructions will be penalised two bands.
